FEATURED PROJECT REPORT

AUGERED CAST-IN-PLACE (ACIP) PILES

Augusta, Georgia

December 2016 - January 2017

A Georgia-based client had a need to install ACIP piles for the construction of a new rail scale inside of an industrial facility. Due to the congested nature of the facility, the entire work area had somewhat limited access and about half of the piles presented an additional challenge due to limited working headroom.

CDC was able to help the contractor in the following ways:

- Equipment selection and procurement (drill rig, grout pump, tool handler, ancillary items)
- Drill tool procurement
- Strategic planning
- Site supervision and troubleshooting
- Onsite training
